

# Project Engineer (Automation)

## COMPANY

Eco-vision

## LOCATION

As, Limburg

## ABOUT US

Eco-Vision has been specializing in designing and constructing water and wastewater treatment plants for over 20 years. We've built over a hundred installations both domestically and internationally, serving various sectors including food, metal, concrete, and pharmaceutical industries.

Eco-Vision is part of Pollet Water Group and can therefore count on the support and strength of this international European business group. Pollet Water Group, with its network of more than 28 companies in 14 countries, is active in over 130 countries worldwide

**Water reuse** is the future, presenting significant challenges alongside immense opportunities. At Eco-Vision, we're committed to revolutionizing production processes, making them not just more efficient but also greener and highly water efficient.

As a **Project Engineer**, you oversee the entire process from designing water treatment projects to their final delivery to industrial clients. Additionally, you dedicate 50% of your time to automating (SIEMENS) the installations.

- **Designing Technical Solutions:** Based on the needs analysis by your Sales colleagues, you develop the technical solutions for water treatment.
- **End-to-End Planning and Design:** From design, construction, piping to automation, you sketch out and draft end-to-end solutions using AutoCAD. Collaborating with your Project Manager, you meticulously plan various aspects and select the best components for the project (including valves, pumps, tanks, piping, electrical, pneumatic, and hydraulic materials).
- **Project Execution and Management:** During project realization, you manage subcontractors, and you ensure adherence to timelines, resources, and budgets. Regular site visits are part of your routine, and you're not averse to rolling up your sleeves.
- **Successful Installation Deployment:** You oversee the successful installation of the system, conduct necessary fine-tuning, and prepare all project documentation (drawings, manuals, spare parts lists, safety certificates, and CE attestations)."

# Project Engineer (Automation)

## PROFILE

- You have a well-rounded engineering background with knowledge of automation, electricity, electromechanics, and you thrive on finding solutions, and relish the opportunity to build new systems. The ultimate completion of a project brings you immense satisfaction and pride.
- Your flexibility enables you to swiftly respond to customer needs and tackle unforeseen challenges head-on.
- You excel under pressure and thrive in an environment driven by enthusiasm, even amidst occasional chaos.
- Your strong communication skills coupled with decisiveness empower you to adeptly manage every facet of a project.
- Proficiency in Dutch is essential, with the ability to express yourself in English and French.

## OUR OFFER:

A great opportunity offering considerable autonomy, room for personal development, and the chance to expand your technical expertise.

A unique challenge in a dynamic, entrepreneurial environment as part of a robust and expansive group.

Experience a familial atmosphere fostering a culture of entrepreneurship, results-driven mindset, and hands-on approach.

Receive a comprehensive and competitive salary package with accompanying fringe benefits.
